Mr. Pat 3.0 out of 5 stars I never installed them because of that. I already have wiring pulled through my walls and its the normal 2 wires with bare ends that connect to a standard springpost connector. In order to use my existing wiring I would have had to add RCA connectors and soldering to one end and buy BOSE AC2 connectors to accept my wiring at the speakers. And the 5 speakers all physically connect to the subwoofer. Huh Really These may be great sounding speakers, I dont know. But for me, they werent worth the installation hassle. Ive always wanted a bose system and finally bought one. Absolutely ZERO

Brackets are included! I had a lot of questions prior to purchasing this product, so maybe this can help some people. Bose is my GoTo for sound, so when I saw this I was very excited. We don't like sound bars very much so we wanted an actual speaker system.<http://fatfailogistics.com/fckeditor/files/95-ford-ranger-xlt-owners-manual.xml>

The bass is very robust and we don't have the bass turned up all the way. 1. 100% satisfied with this product. The wires are a lot thicker than standard speaker cable. I was quite happy with it. I will add more photos if I can at a later date, I'm not home right now. 2. I would definitely recommend taking everything OUT OF THE BOX first. The wires all have special connectors to go into the speakers, so no cutting is required unless you are wall mounting and using the WB50 Wall Bracket. When you do cut, the color of the ground is obviously black, with the other cable being color coded to the sub connection like Rear Left is Green, Rear Right is Light Purple so it helped us when setting up cables to know which went where. 4. The sub is a lot deeper than we expected. See the image it hangs out a little bit. It's the entire width of the box and like 27lbs alone. 5. ZERO WALL BRACKETS ARE INCLUDED. Slide Connect WB50 Worked fine for this speaker model, but we did have to cut and strip the cables to go into the brackets. They are flush mount. If you use the connector included, your cable will be bent weird and it just doesn't work. The only one where we have the bracket and did NOT cut was the center because we made a hole to the storage and just ran the entire cable through. 5a. I bring this up because I asked the question here on Amazon. If the center speaker came with one, to which they told me yes. They recommend 48 ohm, this one is supposedly a 6, but either way, we are happy with how it works. 7. Sub has two knobs to make adjustments as you'd like. I hope that helps. It took us a few hours to set it up, since we had never done one before to this scale. I had a little 4 speaker in my apartment when I was in college, we ran cable under carpet. We love it! Receiver used Marantz NR1509. Worth the higher price than other brands.

As for the special connectors used on the speaker wiring, if I needed to lengthen or shorten the lengths of the wires, I just cut somewhere in between the factory ends and added or subtracted wire. Just be sure to keep the polarity straight, and use good crimp connections or solder. I found the bass lacking in my 20X20 living room though. Be ready to buy a receiver which is not included. Output will be based on your receiver output. Only allowed one sound input. I returned it. Overpriced and out of date. Extremely disappointed. Sorry, we failed to record your vote. Please try again. The only drawback that dropped a star for me was that I couldn't use the speakers with my pre-existing hard wired 5.1 set up. The Bose connections to the speakers aren't just the red and black wiring that other speakers are that would have allowed me to use them. But overall with a good receiver, these sound great. Cependant, si vous avez votre propre filage et vous voulez accrocher les hautparleurs au mur, il faut appeler au service a la clientele de Bose afin de tout commander en meme temps. De mon cote, j'avais fait tout mon filage dans les murs et quand j'ai ouvert la boite et que j'ai vu que les hautparleurs avaient leur propre connecteur, j'ai ete un peu choque. En plus, je mettais acheter des supports de hautparleur generique mais cetaient impossible de les relier avec les hautparleurs.

Leurs supports se posent tres bien, mais lorsqu'on utilise des adaptateurs de connexion, ca devient tres serré pour l'assemblage du support mural. Sorry, we failed to record your vote. And you can place the unit out of sight behind a sofa or curtain. I had what I thought was a decent home theater setup but bought a new piece of console furniture and was looking for smaller speakers best option was the Acoustimas. I went to best buy and kept searching until I saw it on the ground by itself. The entire system is perfect for my setup with my Yamaha receiver. Once I came home, set it all up and turned it on, WOW. Difference in sound was like night and day. I hesitated because of the price tag BUT these are forever speakers. Sounds are louder, bass is amazing. And dialogue is crisp and clear. Never going back to another brand. Easy to setup. Good value for money. Placing it on its side may limit its ability to play at full output for extended periods of time.
